

Do more with less!

Microsense microliter fluorescence measurement solution.
Easy to deposit, easy to recover, easy to clean.

Microsense lets you make accurate, repeatable fluorescence measurements of μL volumes, less than $1/300^{\text{th}}$ of a typical sample! Simply pipette your sample. No dilution means it can easily be recovered. Microsense is easy to clean with no carry-over. Best of all, it can be used with any HORIBA Scientific steady-state or lifetime fluorescence system. Contact your HORIBA Scientific representative to see how far a drop can go.

Microsense

Solutions for:
Elemental Analysis
Fluorescence
Ellipsometry
Raman
OEM Spectrometry
Optical Components
Forensics
Particle Characterization
